

MICHAEL NIVAH

FULL-STACK SOFTWARE DEVELOPER · MOBILE | WEB | API | CLOUD

✉ nivahmichael@gmail.com ☎ +254 745 445 459 📍 Nairobi, Kenya
Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Versatile Full-Stack Software Developer with 5+ years delivering production-grade mobile, web, and API-driven systems across fintech, healthcare, hospitality, e-commerce, and digital government platforms. Skilled across the complete development lifecycle — architecture, development, integration, testing, deployment, and maintenance. Strong command of modern JavaScript ecosystems (React, Node.js, React Native) alongside mobile-native development (Flutter, React Native, Android/Java) and PHP/MySQL systems. Experienced working in agile, cross-functional teams — including collaborative Git branch/PR workflows — and independently managing client projects from concept to launch. Passionate about clean code, scalable architecture, and building products that solve real-world problems.

CORE COMPETENCIES

Full-Stack Development · Mobile App Development · REST & GraphQL APIs · System Architecture · Multi-Tenant Platforms · Cloud & Firebase · CI/CD & DevOps · Payment Integration · Database Design · Agile / Scrum · Test-Driven Development · UI/UX Implementation · Tech Leadership

TECHNICAL SKILLS

Languages	JavaScript (ES2023+), TypeScript, Java, PHP, Python, Dart
Frontend	React.js, Next.js, HTML5, CSS3, Tailwind CSS, Shadcn/UI, Framer Motion
Backend	Node.js, Express.js, Laravel, PHP, REST APIs, GraphQL, WebSockets
Mobile	React Native (Expo), Flutter, Android (Java, Jetpack Compose)
Databases	MySQL, PostgreSQL, MongoDB, Firebase Firestore, Redis
Cloud & DevOps	Firebase, Vercel, Docker (basics), CI/CD pipelines, GitHub Actions
APIs	M-Pesa Daraja, Google APIs, SendGrid, Firebase Auth, Stripe (basics)
Testing	JUnit, PyTest, Selenium, Cypress, Jest, Postman
Tools	Git/GitHub, VS Code, IntelliJ IDEA, Android Studio, Figma (basic)
Practices	Clean Architecture, MVC/MVVM, RBAC & Multi-Tenancy, Agile/Scrum, TDD, Code Review

PROFESSIONAL EXPERIENCE

- Software Developer · Bayan Systems

Jul 2026 – Present · Somalia Remote

 - Contributing as a full-stack developer on MuniCore at Bayan Systems, a multi-tenant digital revenue platform built for municipal governments, currently live across four municipalities.
 - Collaborating on core modules including the Billing Engine and Citizen 360 profile system.
 - Built a companion mobile application for field collectors to support on-the-ground revenue collection.
 - Strengthened the platform's authentication and session security ahead of QA handoff.
 - Built key parts of the application's navigation and dashboard interface, aligned to an approved enterprise design system.
 - Work closely with the development team through a structured code review and pull request process.
- IT Officer & Mobile App Developer · Nobel Lending Limited

Jan 2026 – May 2026 · Nairobi, Kenya

 - Built and maintain a production mobile lending application powering loan origination, repayment tracking, and client management for an active fintech operation.
 - Integrated M-Pesa Daraja API for seamless mobile payments, eliminating manual reconciliation and accelerating transaction processing.

- Engineered performance optimizations and continuous monitoring, maintaining >99% system uptime for internal users.
- Led security enhancements and scalability improvements in collaboration with cross-functional business and tech teams.
- Provided Tier 1 & 2 technical support, resolving infrastructure, software, and connectivity issues across the organization.

Software Developer · Veriscore Limited

Sep 2025 – Jan 2026 · Nairobi, Kenya

- Co-built a real-time Credit Scoring Engine for automated financial risk assessment — from backend logic and scoring algorithms to third-party API integrations and data pipelines.
- Optimized database queries and processing pipelines to support sub-second credit evaluation at scale.
- Contributed to system design and architecture decisions that improved scalability and reduced processing latency.
- Delivered in an agile environment with regular sprint reviews, code reviews, and collaborative debugging sessions.

Freelance Full-Stack Developer · Self-Employed

2020 – Present · Nairobi, Kenya/ Remote

- Designed, built, and deployed 10+ end-to-end applications across healthcare, hospitality, travel, education, and e-commerce — managing full project lifecycles from requirements to launch.
- Built cross-platform mobile apps (React Native, Flutter, Android) and scalable web systems (React.js, Node.js, Laravel), integrating payment gateways, push notifications, and third-party APIs.
- Maintained ongoing client relationships, delivering updates, performance tuning, and feature expansions post-launch.

Key Projects:

- Lotus Fertility App — Healthcare/surrogacy lifecycle management platform (React Native + Firebase)
- Raka BnB — Property booking & reservation management system (React + Node.js)
- Nairobi Beauty World — Appointment and service management platform for a beauty business
- Rocky Driving School — Student enrollment & training progress tracking system
- Namelok Adventures — Travel & tour booking platform with integrated payments
- E-commerce Platform — Full-featured online store with M-Pesa & card payment integration

System Administrator Intern · Kakamega County Revenue Agency

2023 – 2024 · Kakamega, Kenya

- Supported enterprise IT infrastructure — servers, networks, and databases — for a multi-department government agency.
- Performed server maintenance, automated backups, system security hardening, and end-user technical support for 50+ staff.

EDUCATION

BSc. Computer Information Systems — Kenya Methodist University

2021 – 2024 | Second Class Honours, Upper Division — GPA: 3.25

CERTIFICATIONS

Programming Essentials in Python · JavaScript · C++ — Cisco Networking Academy
